

Telecoms Audit from eircom UK

Gain a detailed insight into your current telecoms expenditure.

Telecoms Audit at a glance

- We analyse your billing, contracts and associated data to identify your current total annual telecoms costs
- All infrastructure costs are attributed to one of four categories: Lines and Circuits, Maintenance, Equipment and Other.
- Our easy-to-read management-level report includes an overview of spending and features tabular data and graphs illustrating spend and potential overspend
- We highlight how usage savings can be delivered through closer management of user activity, including call barring, proactive management information and implementation of fair usage policy.
- We will benchmark your costs against our own competitive solutions

Not one enterprise today can afford to bear unnecessary costs. But if you are managing a large telecoms estate over multiple sites or countries, it can be very difficult to detect which of the lines, calls, or other services on your bill are redundant or unwanted.

Organisations with an annual telecommunications spend of more than £100,000 can avail of a Telecoms Audit from eircom UK, to provide a detailed report of you total communications expenditure and highlight areas of potential overspend.

This in depth management report can be used as an effective tool to support and review your existing telecoms strategy and may highlights areas which need further attention. It can also be used to assist with specific projects, such as justification for deployment of Voice over IP.

The audit comprises of three specific areas, a detailed overview of your existing expenditure, tariff benchmarking and estate management. The tariff management element will compare your existing service provider(s) against our own competitive solutions. The estate management evaluation piece will highlight areas of potential overspend within your current estate. The key areas of interest are line rationalisation, equipment and maintenance optimisation and invalid or unauthorised telecoms usage, such as premium rate lines or international calling.

Management of your estate is a continual process and we can deliver our Telecoms Expense Management as an ongoing service in order to assist your business in containing costs. Learn more online at <http://www.eircom.co.uk/TEM>

Optimise Your Telecoms Investment

eircom UK - helping you gain better value

eircom UK is a virtual network operator offering a range of voice and data services to UK and Irish enterprises. In Ireland, eircom owns and operates the country's only nationwide MPLS network, eircom business IP. We work with UK and Irish enterprises to help them drive better value from their communications investment.

What do we require in order to conduct the audit?

An experienced analyst from our team will ask for copies of your recent voice bills and plus your existing agreements. We would also request contacts for all your sites and the schematics of your voice network. Even if the only information you can provide is a copy of your bills, our analysts can usually identify potential overspend; but the more information you provide, the better we're able to highlight your opportunities to save.

What areas does the audit cover?

As well as analysing usage, we produce an inventory of infrastructure costs that allocates every billed recurring cost to one of four categories: Lines and Circuits, Maintenance, Equipment and Other. We then identify, analyse and provide consultative advice on how these costs can be managed more efficiently based on our in-depth knowledge of the market and industry.

Can I expect cost savings?

The audits we produce highlight opportunities to save money by reducing line rental and tariff benchmarking. There are also opportunities for cost reduction through the elimination of unauthorised usage and improved estate management.
